

WORLD HAPPINESS RATES DURING COVID-19

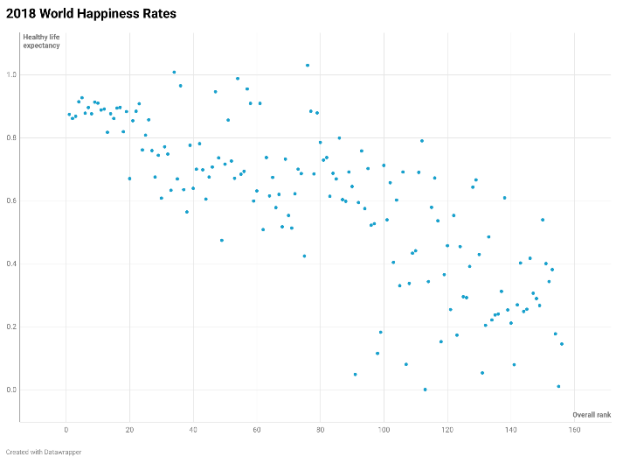

FURKAN KAHRAMAN-16030411039

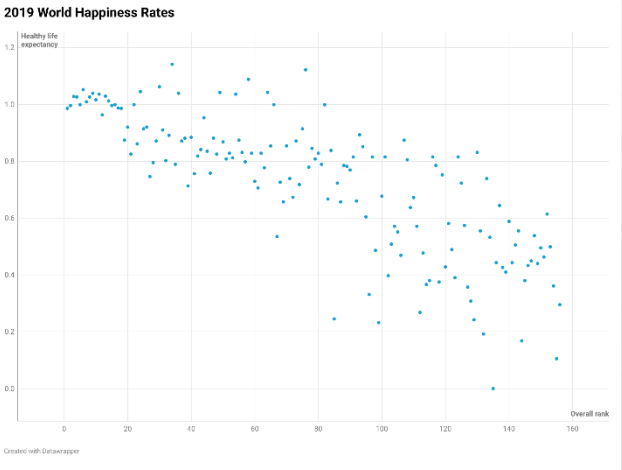

INTRODUCTION

- ✓ Covid-19 has affected the whole world in many ways. In this study, I will discuss the happiness rates in the whole world in the context of Covid-19.
- ✓ In this study, I will primarily share the global happiness data between 2018 and 2021.
- ✓ Later, I will go a little more specific and deal with the year 2020, when the Covid-19 pandemic process started, and the current 2021 data.
- ✓ I will share with you the 5 happiest countries in the world and the 5 most unhappy countries with detailed data.
- ✓ I will refer to the data of Turkey, which is the part that concerns us, starting from 2018 and until 2021. In particular, I will refer to the decreasing happiness rate and "Healthy life expectancy" data during the pandemic process.
- ✓ I will also include the current happiness data of the people from the Turkish media, independently of the datasets, in this presentation.

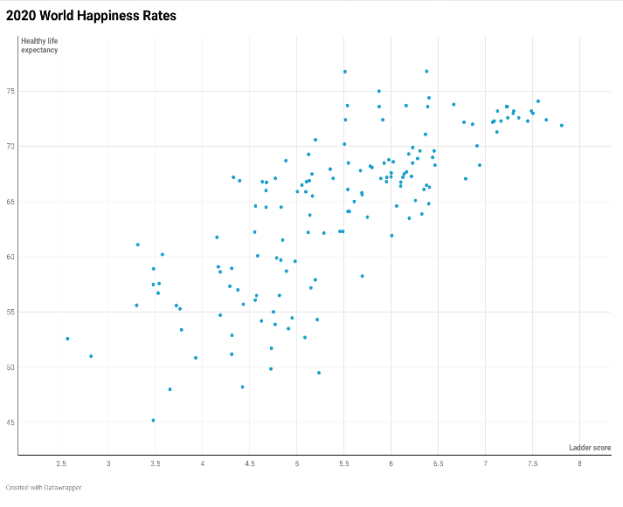

Happiness Rates between 2018 Q1-2021 Q2

CONCLUSION

When we examine all the world data and Turkey data, the results we arrive at;

- ✓ The happiest countries in the world, such as Finland, Denmark and Norway, which are mostly northern countries, remained the happiest countries in the world during the pandemic process.
- ✓ In addition, the countries known as the world's most unhappy countries also kept their place in the list. (These countries are mostly African countries: Zimbabwe, Rwanda etc.).
- ✓ However, when we look at the numerical values before the pandemic process started, we see a decline in the happiness coefficient in almost every country.
- ✓ Even in Norway, which is known as one of the happiest countries in the world, we see that the happiness coefficient in 2020, the year the pandemic started, decreased from 7.48 to 7.39 in 2021, when the pandemic continued unabated.
- ✓ In Turkey, while the rate of happiness has decreased continuously since 2018, the expectation of a healthy life has increased continuously. The rate, which was 5.48 in 2018, decreased to 4.95 in 2021.
